Municipality of Balungao, Pangasinan

USER MANUAL

# iRespond

## Emergency Reporting Command Center

A step-by-step guide to signing in, reviewing emergency reports, reading the map, and managing responders, hotlines, and user accounts.

---

**Administrator**
Staff who monitor reports and keep the command center current

Version 1.0
Last updated: October 2026

# Before you begin

## How to use this manual

You do not need to read this manual from cover to cover. Find the task in the contents, then follow the numbered steps. Button names are written exactly as they appear on screen.

This manual is for the **iRespond command center**, the website administrators use. Citizens submit reports from the mobile application. Those reports, and their photos, locations, and statuses, appear in the command center.

## Symbols and conventions

**Enter Command Center** A button, menu item, or label exactly as it appears on screen.

**pending** A report status. The four statuses are pending, responding, resolved, and invalid.

> **Tip.** A shortcut or habit that saves time.

> **Note.** Extra information about what the system is doing.

> **Important.** This cannot be undone, or the task stops if you skip it.

# Contents

1. **Introduction** — purpose, what iRespond does, who uses it, and what you need.
2. **Getting started** — sign in, find your way around, and update your profile.
3. **Monitoring reports** — dashboard, notifications, the report list, and a review.
4. **Map, analytics, and rejected photos** — GIS Map, Report Analytics, and Non-Emergency.
5. **Responders, hotlines, and users** — accounts the mobile application depends on.
6. **Troubleshooting** — common problems and what to check.
7. **Care of the account** — passwords, disabling accounts, and daily habits.
8. **Frequently asked questions**
9. **Appendix** — statuses, emergency types, integrity signals, and glossary.

# 1 Introduction

## Purpose of the manual

This manual explains how an administrator uses iRespond to monitor emergency reports for Balungao, Pangasinan. It walks through each page of the command center, from signing in to saving a review on a report.

## Overview of the system

iRespond is an emergency reporting system. A citizen submits a report from a mobile phone, with a photo and a map location. A classification service, reached through a REST API, reads the photo and suggests the emergency type. The command center stores the report in the application database so administrators can see it, map it, and review it.

| What you can do | Where |
|---|---|
| See how many reports are pending, responding, resolved, or invalid | Dashboard |
| Open a new-report alert | Notifications |
| Filter reports and save a review | Reports |
| See active cases on a map | GIS Map |
| Create responder accounts and hotline numbers | Responders, Hotlines |
| Disable an account that should no longer sign in | Users |

## Who uses the command center

| Role | Who they are | Main use |
|---|---|---|
| Administrator | Staff with a command-center account | Monitor reports, review integrity, manage responders, hotlines, and users |
| Citizen | A person who submits a report from the mobile application | Not a command-center user. Their reports appear under Reports |
| Responder | Fire, Medical, or Disaster Risk staff | Created in Responders. They update case status from the responder application |

> **Note.** The website described in this manual is the administrator command center. It is hosted on Hostinger. The photo classification API is hosted on Railway.

## What you need

- A computer, tablet, or phone with an internet connection.
- A current browser: Google Chrome, Microsoft Edge, Mozilla Firefox, or Safari.
- An administrator username and password.

- JavaScript enabled in the browser.

# 2 Getting started

## Sign in

**ADMINISTRATOR**

1. Open the iRespond website.
2. On **Admin Access**, type your **Username**.
3. Type your **Password**. Use the eye icon if you want to check the spelling.
4. Tick **Remember me** only on a computer that you alone use.
5. Select **Enter Command Center**.

The Dashboard opens. The heading reads **iRespond Admin**.

> **Important.** If the username or password is wrong, the page stays on Admin Access. Check the spelling, then try again. Do not share the password.

**Screen guide: Admin Access**

1. **Username** — the administrator username, not a mobile number.
2. **Password** — the account password.
3. **Remember me** — keeps the session on this browser.
4. **Enter Command Center** — signs you in.
5. **Register** — opens the page for a new administrator account, when your office allows self-registration.

## Find your way around

The left sidebar is titled **Command Center**. On a phone, open it with the menu icon at the top.

| Menu item | Use it to |
|---|---|
| Dashboard | See counts and the latest reports |
| Analytics | See volume for this week, month, or year |
| Notifications | Read alerts for new reports |
| Reports | Search, filter, and open a report |
| GIS Map | See report locations |
| Responders | Create and enable responder accounts |
| Hotlines | Set the dial numbers used by the mobile application |
| Users | Find accounts and disable one if needed |
| Non-Emergency | See photos the classifier rejected |

| | |
|---|---|
| Settings | Update your name and email |

The bell at the bottom of the sidebar shows unread notifications. It refreshes about every 30 seconds. Your name is at the bottom of the sidebar. Open it and select **Log out** when you finish.

## Update your profile

1. Select **Settings**.
2. Stay on **Profile**.
3. Edit **Name** or **Email**.
4. Select **Save**. A message confirms that the profile was updated.

If the email is unverified, the page offers **Click here to re-send the verification email. Security** and **Appearance** are the other settings pages. Security asks you to confirm your password before it opens.

> **Tip.** Use an email address you can open. Verification and account notices go there.

# 3 Monitoring reports

## Read the Dashboard

**ADMINISTRATOR**

The Dashboard is the first page after sign-in. It summarizes the reports stored in the application database.

1. Read **Total Reports**, **Pending**, **Flagged**, and **Citizens**.
2. Read **Responding**, **Resolved**, and **Invalid**.
3. Under **By Emergency Type**, select **Fire**, **Medical**, or **Natural Disaster** to open that list.
4. Under **Recent Reports**, select **Open** on a row to review that report.

**Integrity** shows **Needs review** in red or **OK** in green. Select **View all** for the full list, or **GIS Map** for locations.

### Screen guide: Dashboard

1. **Count cards** — totals for reports, pending, flagged, and citizens.
2. **Status cards** — responding, resolved, and invalid.
3. **By Emergency Type** — Fire, Medical, and Natural Disaster, each linked to Reports.
4. **Recent Reports** — ID, date, type, status, reporter mobile number, and integrity.
5. **Open** — goes to that report.

## Open a notification

A new citizen report creates a notification titled **New emergency report**.

1. Select the bell, or open **Notifications** in the sidebar.
2. Unread items show a red dot. The page shows how many are unread.
3. Select the notification. iRespond marks it read and opens the report.
4. To clear the list without opening each one, select **Mark all as read**.

> **Note.** If there are no alerts yet, the page says that new citizen emergency reports will appear here.

## Find a report

1. Select **Reports**. The heading is **Emergency Reports**.
2. Under **Category**, select **All**, **Fire**, **Medical**, or **Natural Disaster**.
3. In **Search ID / mobile**, type a report number or a mobile number that starts with 09.
4. Set **Status** to pending, responding, resolved, invalid, or All.
5. Tick **Flagged only** when you want reports already marked for integrity review.

6. Select **Review** on the row you need.

The list shows the confirmed type, the predicted type, confidence, status, the reporter's mobile number, and any issues. Fifteen reports appear on each page. Use the page links under the table to move on.

**Screen guide: Emergency Reports**

1. **Category** — All, Fire, Medical, Natural Disaster.
2. **Search ID** / **mobile** — report number or mobile number.
3. **Status** and **Type** — the two filters beside search.
4. **Flagged only** — limits the list to flagged reports.
5. **Review** — opens the report.

## Review one report

1. Read the report number and the date it was submitted.
2. Look at **Evidence Image**. This is the photo the citizen sent.
3. Under **Classification & Location**, compare **Confirmed** with **CNN predicted** and **Confidence**.
4. Check **Latitude** and **Longitude**. If both exist, a small map is shown. Select **Open in OpenStreetMap** to see the point in a new tab.
5. Read any red line that starts with **Auto integrity signals**.
6. Under **Admin Review**, set **Status**.
7. Type an **Admin note** if the next person on duty needs context.
8. Tick **Flag for integrity review** when the report needs a second look, and type a **Flag reason**.
9. Select **Save review**. The page confirms that the report review was saved.

Select **Back to list** to return to Emergency Reports. The page also shows who last reviewed the report and when.

> **Important.** Saving a review writes the status, note, and flag onto the report. Choose invalid only when the report should not be treated as an active emergency.

**Screen guide: Report detail**

1. **Evidence Image** — the submitted photo.
2. **Classification & Location** — confirmed type, CNN prediction, confidence, reporter, coordinates.
3. **Open in OpenStreetMap** — the same point on the public map.
4. **Admin Review** — status, flag reason, admin note, and the integrity checkbox.

5. **Save review** — stores the review.

# 4 Map, analytics, and rejected photos

## Use the GIS Map

**ADMINISTRATOR**

1. Select **GIS Map**. The heading is **Active Emergency Map**.
2. Leave **Status** on **Active (pending + responding)** to see cases that still need attention. Choose another status, or **All statuses**, when you need a wider view.
3. Set **Type** if you want only fire, medical, or natural_disaster.
4. Tick **Flagged** / **integrity issues only** to hide ordinary cases.
5. Read the map. Red is Fire, blue is Medical, and orange is Disaster. The corner shows how many cases are mapped.
6. Select a marker to open that report.

> **Note.** A report with no latitude or longitude does not appear on the map. Open it from Reports instead.

## Read analytics

1. Select **Analytics**. The heading is **Report Analytics**.
2. Set **Period** to **This week**, **This month**, or **This year**.
3. Read the report count for that period and the date range under it.
4. Read **Most reported type** and the **By Emergency Type** breakdown.
5. Select **Open reports** to return to the list.

If the period has no reports, the page says **No data yet**.

## Review non-emergency uploads

Photos that are not an emergency, or that the classifier will not accept, are kept off the active report list. They appear under **Non-Emergency**.

1. Select **Non-Emergency**.
2. Read **Non-emergency uploads** and **Unique phone numbers**.
3. Search by phone or name.
4. Set **Filter** to **Non-emergency only**, **Low confidence**, **Uncertain**, or **All rejections**.

> **Note.** A photo is accepted as an emergency only when the classifier is confident enough and the top result is clearly ahead of the others. Below that, the citizen is asked for a clearer emergency photo, and the attempt is listed here.

# 5 Responders, hotlines, and users

## Create a responder account

**ADMINISTRATOR**

Responder accounts are for the Fire Department, the Medical Department, and the Disaster Risk Department.

1. Select **Responders**.
2. Under **Create Responder Account**, enter **First name**, **Middle name** if any, and **Last name**.
3. Enter **Mobile number** as 11 digits starting with 09. Example: 09XXXXXXXXX.
4. Choose **Department**.
5. Optionally type **Office** / **station name**, such as a barangay station.
6. Select **Create Responder**.

The new account appears under **Responder Accounts** as **Active**. Search by mobile number, name, or office. Select **Disable** to stop that account from being used, or **Enable** to turn it back on.

> **Important.** The mobile number must be unique and must match the pattern 09 followed by nine digits. A duplicate number is rejected.

## Maintain hotlines

Hotlines are the dial numbers the mobile application shows.

1. Select **Hotlines**.
2. Under **Add Hotline**, type the **Type key**, such as fire, medical, or natural_disaster.
3. Type the **Label** people will read, such as Fire.
4. Type the **Phone number**.
5. Select **Save**.

To change one, select **Edit** on that row, change the label or number, and select **Save**. The type key cannot be edited. Select **Cancel** to leave the form. Select **Delete** and confirm **Delete this hotline?** to remove it.

> **Important.** Deleting a hotline removes that number from the mobile application. Each type key can be used only once.

## Enable or disable a user

1. Select **Users**.
2. Search by mobile number or name.
3. Read the role, the number of reports, and whether the account is active.

4. Select **Disable** or **Enable**.

> **Important.** You cannot disable your own account. The page will say so if you try.

# 6 Troubleshooting

| What you see | What to do |
|---|---|
| Sign-in stays on Admin Access | Retype the username and password. Confirm Caps Lock is off. |
| No reports yet | The database has no submissions. Wait for a citizen report, or check Notifications later. |
| No reports found | Clear Search, set Status and Type to All, and untick Flagged only. |
| A case is missing from the map | Open the report. If latitude or longitude is empty, the map cannot place it. The integrity line may say incomplete. |
| Needs review, or cnn_override | The confirmed type and the CNN predicted type differ. Compare the photo with both labels, then save a review. |
| low_confidence | The classifier was not confident. Look at the photo before you treat the type as final. |
| Responder mobile number is rejected | Use 09 and nine more digits, and a number that is not already on an account. |
| Hotline type is rejected | That type key already exists. Edit the existing hotline instead of adding a second one. |
| You cannot disable a user | That account is yours. Ask another administrator if it must be disabled. |
| The bell shows nothing new | Open Notifications. New reports appear after a citizen submission is stored. The bell also refreshes about every 30 seconds. |

# 7 Care of the account

- Sign out with **Log out** when you leave a shared computer.
- Do not tick **Remember me** on a shared computer.
- Keep the administrator password private.
- Disable a responder or citizen account that should no longer submit or receive cases. Enable it again only when the office agrees.
- Write a short **Admin note** when you change a status, so the next shift can see why.
- Check **Pending** and the GIS Map at the start of a shift. Pending and responding cases are the active ones.
- Check **Non-Emergency** if citizens report that a real photo was refused. The filter shows whether the reason was non-emergency, low confidence, or uncertain.

# 8 Frequently asked questions

**Where do citizen reports come from?**
From the mobile application. Each accepted report stores a photo, a confirmed type, the classifier’s prediction and confidence, and the map coordinates.

**Which emergencies can be reported?**
Fire, medical, and natural disaster.

**Who changes a case from pending to responding?**
A responder can update the status from the responder application. An administrator can also set the status on the report page and select **Save review**.

**What does Flagged mean?**
Someone ticked **Flag for integrity review**, or the report already has an integrity signal. Use **Flagged only** on the report list to see them together.

**Can I delete a report from the command center?**
No. You can change its status, including invalid, and you can record a note. Deleting is not a button on the report page.

**Why is the predicted type different from the confirmed type?**
The citizen confirmed a type that is not the one the classifier suggested. The report shows cnn_override. Compare the photo, then save your review.

# 9 Appendix

## Report statuses

| Status | Meaning |
|---|---|
| pending | Submitted and not yet being handled |
| responding | A responder is handling the case |
| resolved | The case is finished |
| invalid | The report should not be treated as an active emergency |

On the GIS Map, **Active (pending + responding)** means both of the first two statuses.

## Emergency types

| Type | On screen | Map color | Responder department |
|---|---|---|---|
| fire | Fire | Red | Fire Department |
| medical | Medical | Blue | Medical Department |
| natural_disaster | Natural Disaster | Orange | Disaster Risk Department |

## Integrity signals

| Signal | Meaning |
|---|---|
| cnn_override | Confirmed type and CNN predicted type are different |
| low_confidence | The stored confidence is low |
| incomplete | The photo or the coordinates are missing |
| flagged | An administrator marked the report for integrity review |

## Glossary

| Term | Meaning |
|---|---|
| Command center | The administrator website |
| Confirmed type | The emergency type stored with the report |
| CNN predicted | The type returned by the classification service |
| Confidence | How sure the classifier was, shown as a percent |
| Hotline | A phone number the mobile application can show for a type of emergency |
| Responder | An account for Fire, Medical, or Disaster Risk staff |
